PAVA & Acoustic

Smart City Solutions

In 2006, based in **Dubai Silicon Oasis** at the heart of the most vibrant country in the Middle East; ATEIS Middle East FZCO was formed to expand the ATEIS success story outside Europe, and to reach the Middle East & India Markets.

Rapidly our company grew from just two engineers to a team of more than 60. This expansion helped secure and deliver an enviable portfolio of **more than 2000 Mega installations** in the region.

To deliver the vision to become the number ONE in the Life-Safety industry; ATEIS Middle East

established the First UAE Production Facility for Fire Detection and Alarm Systems under the VELOX brand name.

In addition our **in-house R&D** team are continually innovating fire detection solutions that are fully integrated with the Ateis Pro-audio PAVA offerings, and have filed several patents relating to our micro-power technology, reinforcing **VELOX** as a leading brand in the fire industry.

Today the ATEIS brand name is synonymous with quality and is backed by our assurances of **Responsibility** and rapid **Response** essential in building a healthy **Relationship** with our customers.

What We Do

PAVA, Commercial Audio & Speakers

35 years of manufacturing excellence gives us the most complete range of PAVA, speakers and commercial audio systems available in the market today. Full integration with the Velox fire alarm range not only gives the latest features and technology but also, more importantly, an unparalleled level of safety.

Fire Alarm System

The Velox fire alarm systems give the capability of offering first class protection for all sizes of buildings; from a single villa to the largest shopping malls, towers and commercial properties. **The UAE manufactured & fully approved products** are industry leading in terms of quality, features and depth of range.

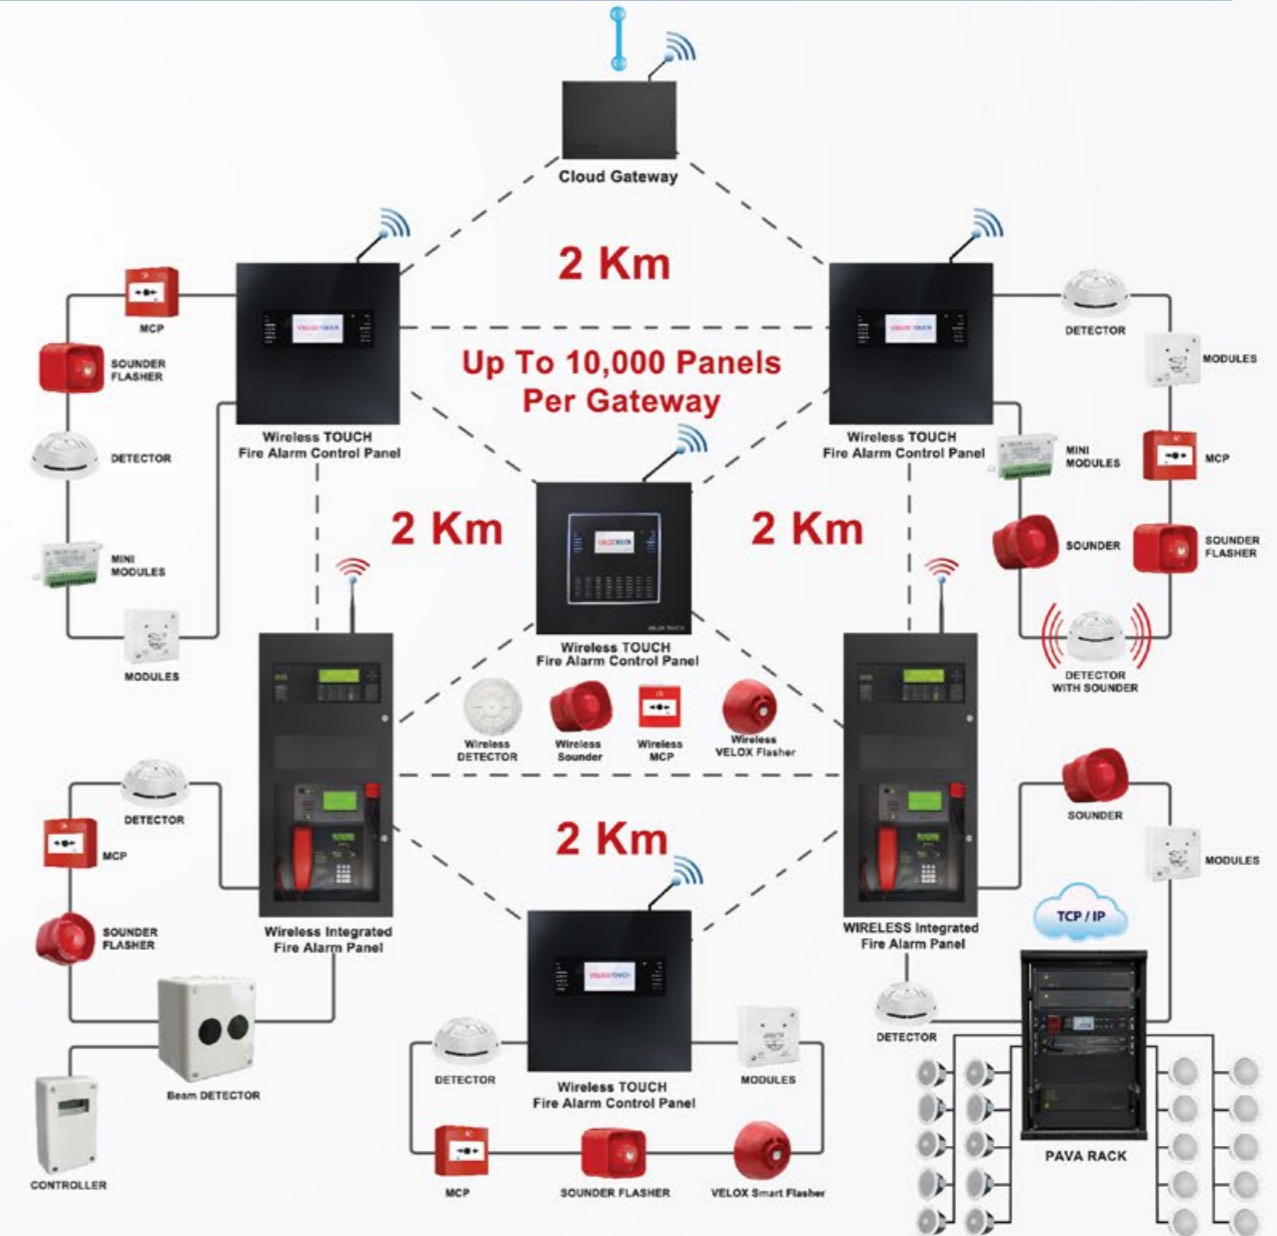

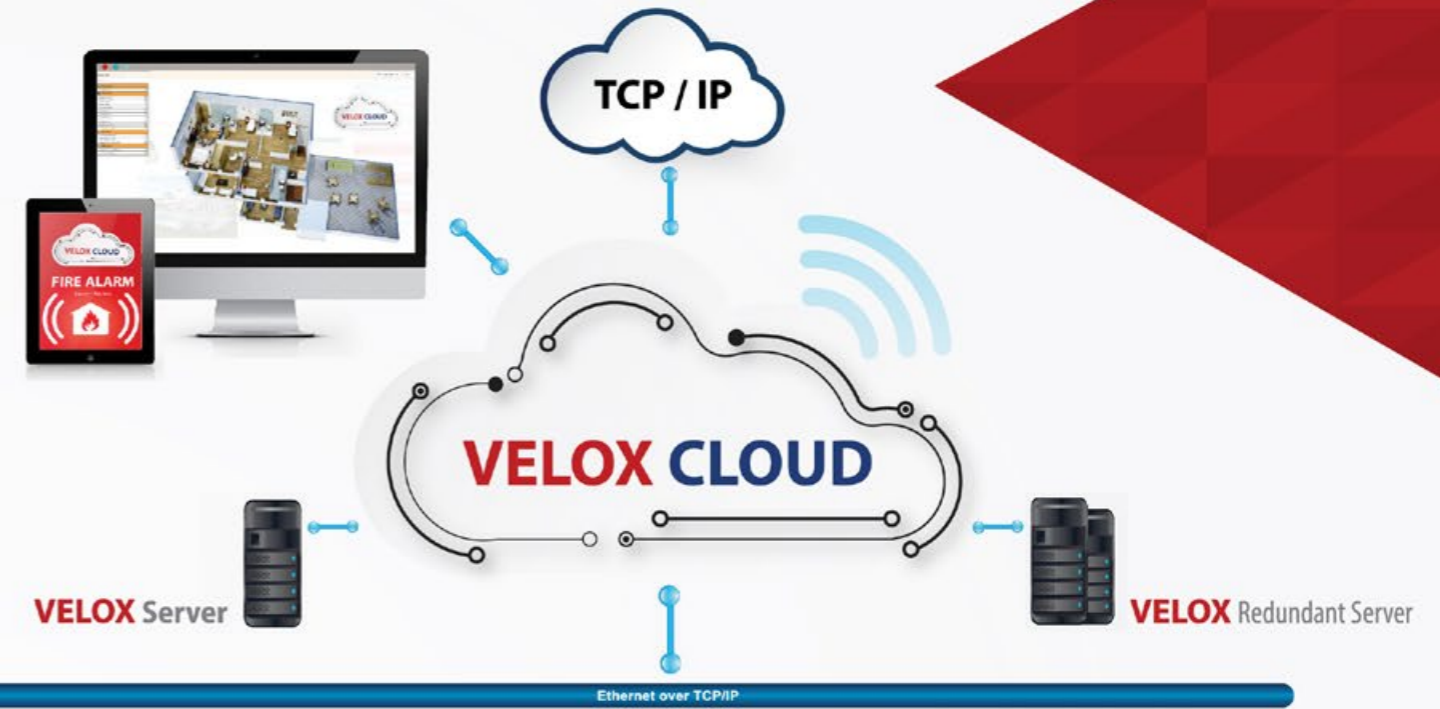

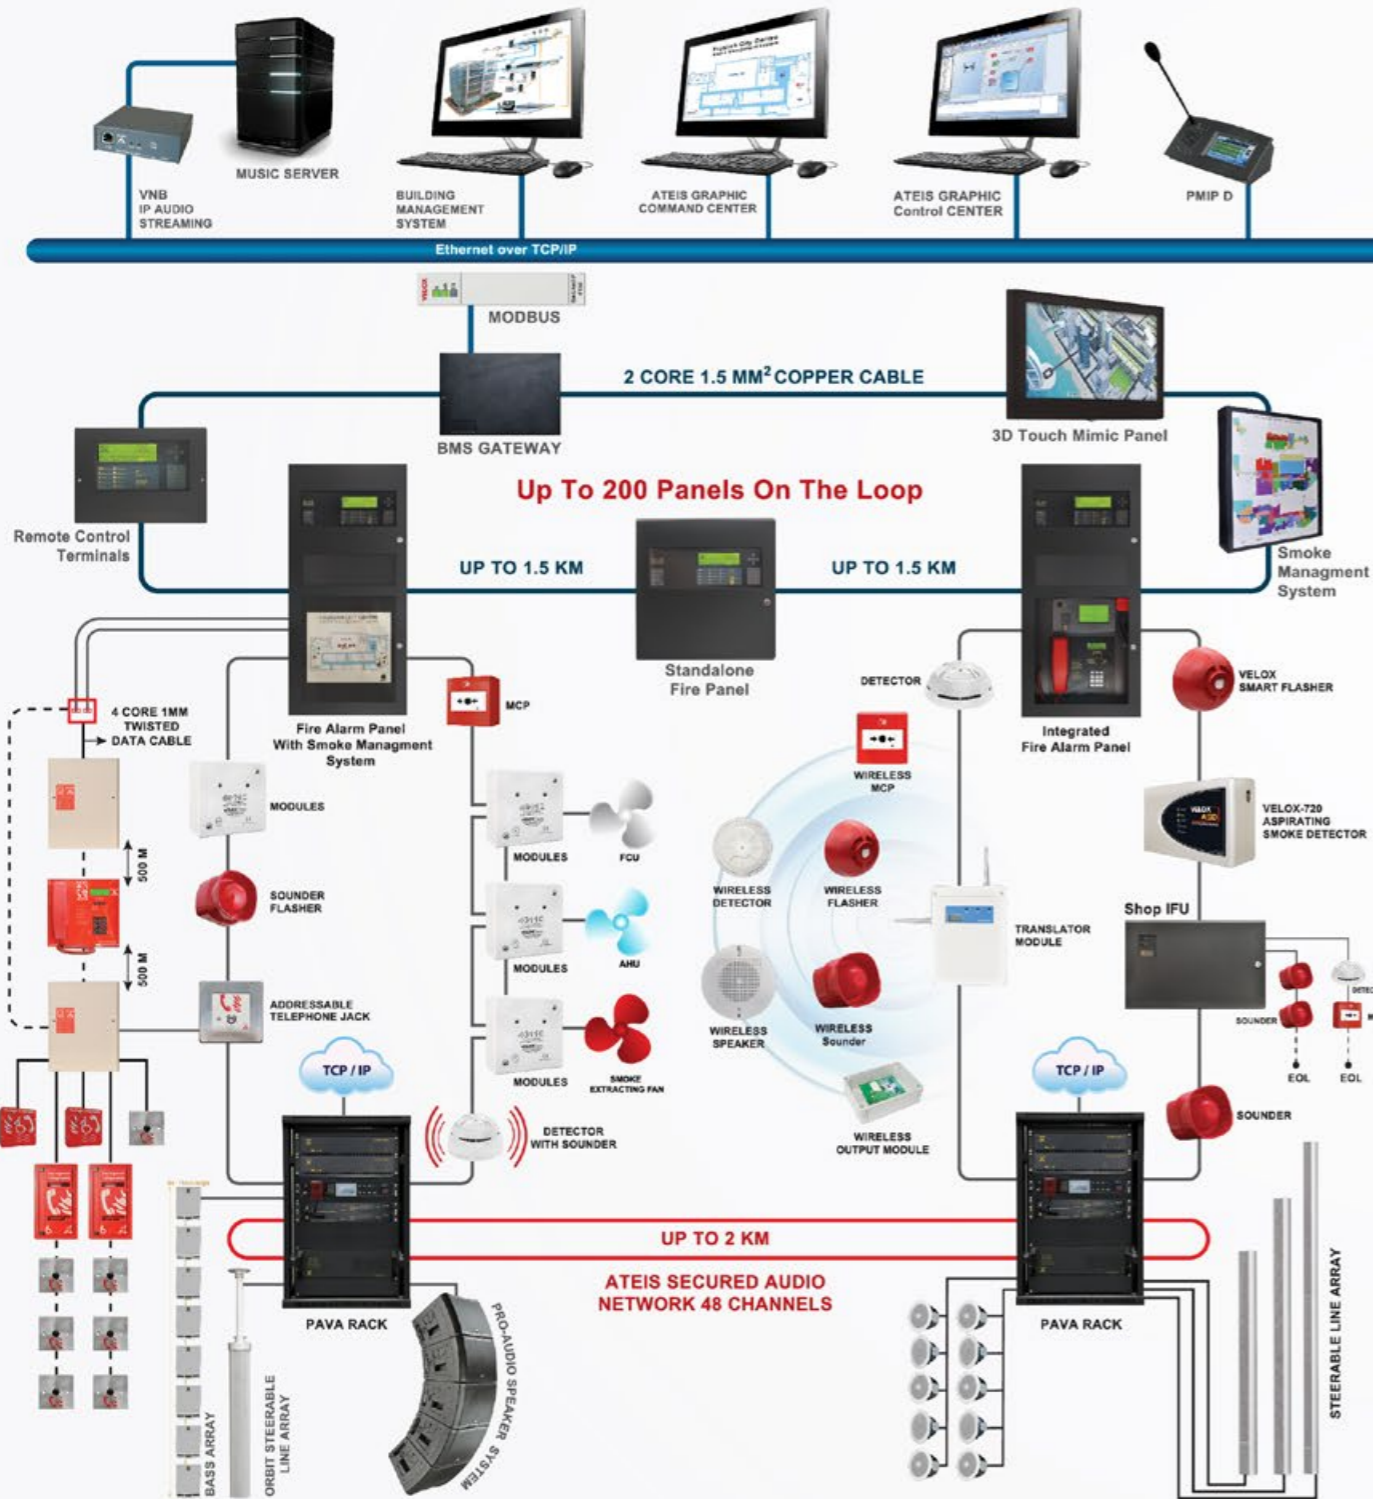

Smart City Solutions

The ATEIS **IoT based** ranges of fire, safety, security and energy/resource-saving solutions gives more scope and flexibility than ever before. The ability to provide **life safety information**, instantly, to multiple destinations (including mobile devices) is helping to make 'Smart Cities' safer places to live and work for all of us.
